HPV PAID PROPAGANDA VS. THE FACTS

Media: Reports that Cervical Cancer is the #2 Killer of Woman

FACT: Cervical Cancer According to Mayo Clinic ...Cervical Cancer doesn't even make the Top 10. The top 10 leading killers of women in the U.S. are heart disease, stroke, lung cancer (more than 70,000 deaths of women per year), respiratory diseases, Alzheimer's, breast cancer, diabetes, accidents, flu/pneumonia and colon cancer. About 3,700 U.S. women die of cervical cancer each year; that is about 1/8th of the number of women who die from colon cancer, the No. 10 killer of U.S. women.

Media: Gardasil (HPV Vaccine) protects woman from cervical cancer.

FACT: Gardasil is NOT a cancer vaccine. It is a vaccine that claims to prevent only 4 out of over 100 HPV viruses.

"HPV, it's a sexually transmitted disease that's virtually 100 percent avoidable without a vaccine. Additionally, most cases of the infection clear up on their own. HPV can be overcome by means such as adequate sunlight exposure and vitamin D consumption, supplementation with probiotics, adequate intake of selenium and zinc, increased

consumption of trace minerals and iodine, and regular physical exercise. (Dr. Marcola)"

Media: HPV Vaccine has little to no side effects such as...redness around the injection site, fever and headache.

FACT: *The Washington Times* reports additional concerns about negative side effects from the vaccine reported in 20 states. The article quotes :

"The most frequent serious health events after GARDASIL shots are neurological symptoms," said NVIC Health Policy Analyst Vicky Debold, RN, Ph.D. "These young girls are experiencing severe headaches, dizziness, temporary loss of vision, slurred speech, fainting, involuntary contraction of limbs (seizures), muscle weakness, tingling and numbness in the hands and feet and joint pain. Some of the girls have lost consciousness during what appears to be seizures."

From the National Vaccine Information Center:

In an analysis of reports made to the federal Vaccine Adverse Event Reporting System (VAERS) since the CDC's July 2006 universal use recommendation for all young girls, NVIC found reports of loss of consciousness,

seizures, joint pain and Guillain-Barre Syndrome.

The Gardasil vaccine has only been on the market since June 2006, and there are already 82 reports of serious adverse events filed with the FDA following the administration of this vaccine. (As of date that number could be significantly higher)

FACT: Because the HPV vaccine was only studied for 3 1/2 years, the long-term effectiveness and safety of this vaccine has yet to be determined. It took years for thalidomide and Vioxx (also a Merck product) to demonstrate their most negative side effects.

Merck also states "The duration of immunity following a complete schedule of immunization with GARDASIL has not been established."
