Herding Trial Arena Dog - Course #2 Description

The handler's post is located approximately halfway between the North and South ends of the arena, or a minimum of 110 ft. from the set-out gate, 20 ft. off of the West side. The free-standing pen is located halfway between the handler's post and the South end of the arena, 20 ft. from the West fence. (A trailer may be substituted for the pen.) The opening of the Y chute is located approximately halfway down the length of the arena on the East fence, or a minimum of 110 ft. from the area just in front of the gate of the free-standing pen. The Y chute should be no less than 12 feet long and no more than 4 feet wide with an opening of 12 feet. (A bridge may be substituted for the Y chute.) The panel obstacle is located 20 ft. from the West side and 30 ft. from the North side of the arena, set parallel to the West side and with a 12 foot opening. The sorting area is the area roughly between the free-standing pen and the handler's post. The freestanding should be 8-10 ft. on each side for sheep.

1. Gather

The stock are let out at the repen gate and allowed to settle. HTAD I handlers take the dog to a point approximately one-half the distance from the handler's post to the stock and leave the dog; the handler may move to approximately 15 ft. from the stock and send the dog to gather. HTAD II handlers leave the dog at the handler's post and move to a point approximately halfway between the post and the stock and send the dog to gather. HTAD III handlers and dogs stay at the handler's post, and the dog is sent from there to gather the stock. At all three levels the stock are brought to and around the handler's post, on the side between the post and the Y chute. The gather ends when the stock have gone just past the handler's post.

2. Drive

The stock are taken South between the East fence and the freestanding pen, then around the pen to a point just in front of the pen gate. Handlers at all levels may accompany the stock to this point. The stock are then driven to the Y chute. HTAD I handlers may accompany the stock and dog, fetching or driving or a combination of both. HTAD II handlers may accompany the stock and dog to a point halfway to the Y chute. HTAD III handlers must remain at the position in front of the pen while the stock are driven to the Y chute. The drive ends when the stock reach a point 10 ft. in front of the Y chute.

3. Obstacle 1

The stock are taken through the Y chute. HTAD II and III handlers remain at the designated location until the stock have cleared the Y chute. HTAD I handlers remain at the entrance of the Y chute until the stock have cleared it. Obstacle 1 ends when the stock have cleared the Y chute.

4. Obstacle 2

Upon the stock exiting the Y chute, HTAD I handlers may fetch or drive the stock through the free-standing panels, Obstacle 2 (none the handlers may go through the panels). HTAD II handlers must stay on the post side of the handler's line (which runs across the width of the arena, even with the outside edge of the panel obstacle that is nearest the center of the arena) until the stock have cleared the panel obstacle. HTAD III handlers will remain behind a handler's line that runs the width of the arena even with the handler's post until the stock have cleared the panel obstacle. Once the stock have cleared the panel obstacle, the stock are turned to the left and taken to the pen; all handlers may take any position relative to the stock when going to the pen. Obstacle 2 ends when the stock have cleared the panels.

5. Obstacle 3

The stock are penned in the freestanding pen. Scoring for the pen ends when the pen gate is closed.

6. Sort

The animals are removed from the pen and taken to the sorting area. HTAD I and II handlers briefly hold the stock, then take them to the repen. For HTAD III handlers, the handler will remove the ribbon from the specified sheep. The sort ends for HTAD I and II at the conclusion of the hold, and for HTAD III when the ribbon is removed/animals are shed.

7. Repen

The stock are taken to the repen. At all levels, handlers may be in any position relative to the stock. The stock are held a short distance off the gate while it is opened, and then the animals are repenned. The run ends when the repen gate is closed.
