

RUST TREATMENT

After researching the different rust treatment products available, I've decided to go with **Eastwood Rust Encapsulator**.

- Encapsulates rust & primes in one step
- Minimal prep - remove loose rust, degrease, & apply
- Can be used under or over body fillers
- Compatible with most top coats
- Available in Red, Black, Silver, & Clear
- Eastwood Rust Encapsulator has been tested by an independent lab to be the most effective rust preventive product yet. Tested against well-known brands, the Eastwood Rust Encapsulator has proven to be superior in sunlight resistance, preventing rust creep, and overall durability. One quart covers about 50 sq. ft. with a double coat. Can be thinned up to 20% with lacquer thinner for spraying.

Of the different products out there, I've heard it works best, is less messy, less expensive than some of the other products, less prep, and can even be had in a aerosol can.

Comments from users:

"I am more pleased with it than POR. It's a red oxide primer, easy to apply compared to the POR. and then use a chassis black. Nice finish. Has held up very well for the last 5 years"

"I have used it and zero-rust"

"I prefer Eastwood's Rust Encapsulating Paint, since it is easier to use and seems to perform as well as other products on the market"

Directions: Wire brush to remove loose particles of rust, then apply.
