

SAVE OUR SOUTH PARK WATER 08

RE: Black Range Mining CUP application for Taylor Ranch

Dear Commissioners:

You may think it odd that a group from Park County would be contacting you regarding a CUP application in Fremont County. We are also facing an In Situ uranium mining proposal in our area.

We have done extensive research on the consequences of uranium mining on ground water and residential property values. Through our website, www.freewebs.com/SOSPW08/home.htm, you may access the results of our research.

We have learned that, without exception, these uranium mining operations have resulted in the destruction of the landscape, ground water and residential property values. When a "best use" economic model is applied, the long term negative consequences of a few short term jobs, mostly for people from other areas, far outweigh any local economic benefit.

We support the Tallahassee Area Community in their efforts to limit uranium mining near their residences. We ask that you support them in their efforts by denying the Black Range Mining CUP for exploratory work.

Respectfully,

Doran D. Moore
